

## Geofoam No. 5010

**Subject: Membrane Suppliers**

**Date: June 2012 (Revised January 2019)**

ThermaFoam R-Control Geofoam is often used in applications where a designer has specified the use of a geomembrane. Geomembranes are commonly used to provide waterproofing when geofoam is used in a building application or to provide resistance to hydrocarbons in transportation applications.

When a geomembrane is specified, the requirements for the geomembrane must be well understood to ensure the proper selection of membrane is made as a wide range of materials are available. Please contact the geomembrane

manufacturers directly for product selection, suitability to meet project requirements, geofoam compatibility, and installation recommendations.

The following list of geomembrane suppliers is provided as a courtesy to ThermaFoam R-Control Geofoam users and is not necessarily exhaustive.

**Agru America, Inc**
